

MAIN CAMPUS, SHALIMAR-190025, SRINAGAR

NAME OF THE INNOVATION

Development of Recombinant Lactic acid bacteria based vaccine for Salmonellosis in poultry

FOUNDER
Dr. Syed Mudasir Andrabi
Associate Professor

The available vaccines against *Salmonella* have several disadvantages like inability to provide prolonged immunity and reversion of virulence. To overcome these failures, we propose a strategy of using non-pathogenic lactic acid bacteria for displaying FimH antigen of *Salmonella typhimurium* as promising candidates for the development of novel vaccine against Salmonellosis.
